DETAILED ACTION***Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1,2,8-11,17,18 and 20 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-19 of U.S.

Patent No. 6,349,765 in view of Holmes. Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims are similar except for the claims of the parent call for an expandable diaphragm, while the claims of the instant application call for a flexible diaphragm. It would have been considered obvious to use a flexible diaphragm in place of an expandable diaphragm since expandable diaphragms are flexible. The amended claims also eliminated the pressure switch. It would have been considered obvious to eliminate the pressure switch from the parent claims since if the pressure in the tank is not to be monitored there would be no need for a pressure switch. The parent application calls for a relief valve and a flow control valve. While the parent claims use a control valve, no mention of a relief valve is

made. Holmes teaches the use of a relief valve 85 that protects the control valve 82 from failure. It would have been considered obvious to provide the parent claims with a relief valve as taught by Holmes in view of Holmes' teaching that a relief valve prevents or minimizes failure of the control valve. As to claim 20, it would have been considered an obvious design choice to form the control and relief valves as an integral unit.

Allowable Subject Matter

Claim 21 is allowed.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
